

ensorcell.

Life science tools reimaged.

Who is Ensorcell?

True to our name, Ensorcell™—meaning to enchant or mystify—we aim to bring a sense of wonder back to the tools that power modern science. We intentionally engineer life science tools to be fit-for-purpose and designed to last. We reimagine what is possible with premium tools that are accessible, intuitive, and reliable at an affordable price point. This is driven by an environment where curiosity thrives, experimentation is encouraged, and products are designed to drive innovation forward.

Portfolio overview

- Tube welders
- Gas mixers
- Imaging platforms

Life science expertise

We are passionate about solving life science problems to help you launch your next big discovery.

Customer driven

We partner with researchers and scientists to better understand and meet your needs, in and out of the lab.

Innovative engineering

We re-imagine life science tools to more precisely engineer solutions that are simple and intuitive.

Superb value

We ensure that our products offer a high-quality solution at an accessible price.

Thoughtfully designed tools and products.

Ensorcell offers a suite of life science tools that combine exceptional performance with intentional affordability. Our product portfolio encompasses innovative laboratory equipment, bioprocessing technologies, diagnostic systems, and research instrumentation designed to make critical scientific advancements more accessible. Every product we create showcases our commitment to reimagining tools that accelerate healthcare innovation while removing traditional cost barriers.

Versaweld

TUBE WELDER

The Versaweld™ sterile tube welder provides portable, cost-efficient tube welding across multiple sizes and materials with no adapters required. Its quick-load ribbon cassette replaces single-use blades, and the compact form factor enables easy movement in the lab.

Premaerix

GAS MIXER

The Premaerix™ gas mixer provides precise concentration control from full flow to true zero in a compact, cost-efficient design. A quiet compressor, smart water management, and touchscreen interface enable reliable, flexible operation.

Cellular Focus

IMAGING PLATFORM

Cellular Focus™ builds custom imaging workstations tailored to each lab. Through high-quality components, intuitive software, and close collaboration with scientists, we deliver reliable, powerful, and affordable systems for real-world use.
